

EDR PACKAGE

IDENTIFY FRAUDULENT COLLISIONS

FOR A LUMP SUM,
the package includes the following steps:

- Summary visual inspection of the vehicle
- General photographs and photographs of damage
- Reading of the event data recorder (EDR)
- Copy of the data collected
- Summary interpretation of the most relevant data
- Fraudulent collision indicators that have been identified
- Comments and recommendations regarding pursuit of mandate

Depending on the available data, we will provide you with the "vehicle version" so that you can compare it with the driver's version and determine if the collision occurred in accordance with the information provided to you. By means of our comments and recommendations, you will be able to identify the possible fraudulent collisions, as well as the files for which it will be judicious to pursue the mandate while limiting your costs for the other files.

** This package only applies to vehicles towed to our workshop in Laval*

** Costs associated with the unistallation of the EDR or the purchase of specific cables (infrequent situation) are not included*

To entrust us with a mandate, contact us:

By email: info@pyrotechbei.com

By phone: 450.967.1515 (Laval)
